About vegeoSm.js

VegeoSm.js is a reduced version of vegeo.js©, with fully workable following features:

- **No single sharing link** – each page of the website has its own URL link, as any other standard web site ;
- **URLs changes normally** when triggering a link in navigation menu, or any other link in the page content, i.e. URLs are updated without refresh of the page;
- **Selection of navigation buttons follows the change of URL** and of page content when selecting a link in navigation menu.
- **Full crawlability** – each URL and its content can be shared, bookmarked, and fully crawled by search engines.

Additional features that are available only in the full version of vegeo.js©:

- **Back and forward browser buttons work** - URLs change when triggering back or forward buttons, also selection of navigation buttons follows the change of URL and of page content when selecting (clicking) back or forward buttons. URLs are updated without refresh of the page;
- **Sub-links or other internal links** to other pages or to content in other pages execute in the same way, i.e. have the same functionality as navigation menu links.
- **Any initially loaded page** of the web site loads the same way after hitting the back button on a following web page, i.e. has the same functionality as listed in previous topics. Initial URL is updated without refresh of the page.
- Preventing page flickering or shivering at load;
- **Full compatibility** with any other existing JavaScript or jQuery in the web page, as well as no conflict with load of any other existing JavaScript or jQuery in the web page.
